

Poly TENCEL

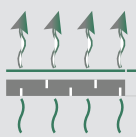

bringing new meaning to comfort and sustainability

soft

moisture
management

breathability

high tenacity

versatile and
strong

sustainable

TENCEL lyocell fibres are extracted from sustainable wood using a unique closed loop production process. The fibre's physical property leads to moisture management, enhanced softness and great strength. TENCEL is extremely eco-friendly. The fibres have significantly smaller impact on the environment as they require 10x-20x less water and no pesticide.

The **polyester fibres** used are repurposed from plastic bottles. When blended together, the resultant sustainable fabric is PolyTencel.

PolyTENCEL has enhanced softness, excellent drape and outstanding moisture management due to the added Tencel, and great tensile strength, fade resistance and durability due to the polyester. This makes PolyTENCEL ideal for harsh and hot work environment.

GARMENT SOLUTIONS

- Fabric available in knit and woven solutions
- Hi-vis range available
- Silhouette and styling options based on fabric weight
- Various pocket solutions and closure options
- Customized colour combinations
- Additional reflective tapes or reflective elements
- Customer logo print or embroidery option
